

~~Please~~ Please replace the paragraph beginning on page 4, line 1, with the following rewritten paragraph:

B6
--a second support substrate having an image layer formed thereon, the second support substrate being secured to the first support substrate so as to form the dual sided integral composite image product; the integral composite image product having a fold line about which the integral composite image product may be folded;--

~~Please~~ Please replace the paragraph beginning on page 4, line 10, with the following rewritten paragraph:

B7
--a support substrate having an image layer formed thereon, the support substrate having a plurality of fold lines about which the image product may be folded; and--

In the Claims:

~~Please~~ Please cancel claims 13, 14, 24, and 25.

~~Please~~ Please amend claims 10, 12, 15, 16, 17, 18, 19, 23, 26, 27, 29, 44, 45 and 47 as set forth below:

B8
Sub C17
comprising;

10.(Once Amended) A dual sided folded image product
a sheet having a first side and a second side, said first side having an image layer formed on said sheet, said sheet having two spaced fold lines which form a central section, a first side section and a second side section, said central section being positioned between said first and second side sections, said side sections being folded on said central section so that said image layer is exposed.

B⁹

12.(Twice Amended) A dual sided folded image product according to claim 11 wherein of said side sections having an end that is substantially abut each other.

15.(Once Amended) A dual sided folded image product according to claim 10 wherein said sheet is made from a photographic paper.

16.(Once Amended) A dual sided folded image product according to claim 10 wherein said sheet is made from a thermal media.

B¹⁰

17.(Once Amended) A dual sided folded image product according to claim 15 wherein said sheet includes a photographic emulsion layer.

18.(Once Amended) A dual sided folded image product according to claim 10 wherein said composite image product comprises a cover for holding at least one leaf.

19.(Once Amended) A dual sided folded image product according to claim 10 wherein said composite image product comprises a free standing product.

B¹¹

23.(Once Amended) A dual sided integral composite image product according to claim 20 wherein said support substrate is made from a photographic media.

26.(Once Amended) A dual sided integral composite image product according to claim 23 wherein said image layer comprises a photographic emulsion layer.

B¹²

27.(Once Amended) A dual sided integral composite image product according to claim 20 wherein said composite image product comprises a cover for holding at least one leaf.

29.(Once Amended) An image product comprising:

B13
a composite cover having a first support substrate having an image formed layer thereon, and a second support substrate having an image layer formed thereon, said second support substrate being secured to said first support substrate so as to form said dual sided integral composite image product; said integral composite image product having a fold line about which said integral composite image product may be folded;

at least one leaf having a first support substrate having a separate image layer thereon, and a second support substrate having separate image layer thereon, said second support substrate being secured to said first support substrate so as to form said leaf; and

an attaching member for securing said at least one leaf to said cover.

44.(Once Amended) A dual sided integral composite image product, comprising:

B14
a first support substrate having an image layer formed thereon;
a second support substrate having an image layer formed thereon, said second support substrate being secured to said first support substrate so as to form said dual sided integral composite image product; said integral composite image product having a fold line about which said integral composite image product may be folded;

an attachment section integrally formed with said first and/or second substrate.

45.(Twice Amended) An integral composite image product, comprising:

B15
a first support substrate;
a second support substrate having an image layer formed thereon, said second support substrate being secured to said first support substrate so as to form said integral composite image product; said integral composite image product having a fold line about which said integral composite image product may be folded;

B15
concl.

an attachment section integrally formed with said first and/or
second substrate.

B16

47.(Twice Amended) A image product, comprising:
a support substrate having an image formed layer thereon, said
support substrate having a plurality of fold lines about which said image product
may be folded; and
an attachment section integrally formed with substrate.
